

Status Report - Esraa Amir

Issue & Observation:

1. Unable to locate certain elements by ID; some require XPath or CSS selectors.
2. Manual interaction needed for reCAPTCHA before automation can continue.
3. Multiple buttons like 'Login', 'Later', 'Close', 'New Reservation', etc., require proper locators.
4. Dropdown selections ('Visit Purpose', 'Reservation Source') need special handling.
5. Unit and Guest selection involve hover actions and confirmation clicks.
6. 'Check-In' button requires wait before clicking.
7. Error handling: 'Save reservation failed' popup observed.

Details:

- Automation built using Selenium WebDriver with Java.
- Page Objects created for LoginPage and ReservationPage.
- Explicit waits implemented for dynamic elements.
- Hover and click actions used for unit and guest selections.
- All locators identified using XPath or CSS selectors where ID not available.
